ORSTEEL SUCCESS IS OUR MISSION

Innovation Must

If you don't change your mind and to ask your self frequently if you are winning the race in a very fast growing competitive market you will not be able to maintain your chair in your company that world is running towards more productivity and less cost.

We can help you to find the way but be serious and think innovation.

Smart Budget

Try our techniques to choose technologies based on value engineering that this branch of engineering helps you to decide your correct effective budget and pay attention that most of us fall in saving in what we must invest and waste in what we can save.

At all have a look and evaluate annually your budget and effective return and long run investment mortgage

Who Can Decide

Many cases in management in a non growing company follow the same theory of Mr. Boss and Mr. Yes Sir that the technical decision may be taken by an incompetent Boss and agreed by a Yes Sir Man and the victim in this case is the society or the company itself.

Relay on a consulting firm who think both business and process in a global way.

Everlasting innovation of rolling engineering

Across years of hard work and ambition we have obtained good results with our European costumers who required to be competitive and we have three axes of success based on: Modernization of steel plants and making it more efficient, To produce new products to have better chance for marketing ,To find the suitable managerial way to increasing both yield and productivity.

We have to say that the most important factor of success in a steel mill is the man himself and from our experience in the best steel mills in Italy we can confirm that the process is based on the human being before technology.

THINK BUSINESS
OR STEEL

We have the capability to add value to your rolling mill starting from
 Optimizing your existing mill to reach its maximum capacity
 Adding commercial value inserting new products and helping you to reach the international quality standards.
 We study modernization of steel mills and we have success stories in Italy rising with productivity till two times.
 We are partners of several manufacturers of technology and through Orsteel we can guarantee both high quality and reasonable prices.
 We produce also our own machines designed in Italy and produced under our supervision in China and India.
 Orsteel is a growing firm who is respecting international standards and human values so we help you to achieve training courses for you staff in the best institutes in Europe and care about industrial environment and we offer consultancy through our allied institutes to create your quality and environment systems.
